

EVERPURE
▶ FROM PENTAIR WATER SOLUTIONS

A hand is shown holding several fresh, vibrant green mint leaves. The background is a close-up of a glass filled with a refreshing beverage, likely lemonade, featuring several ice cubes and slices of lemons. The scene is set against a clean, white background, with a blue diagonal graphic element on the left side of the image.

KEEP YOUR COOL WITH EXTRAORDINARY ICE

STANDARD FLOW

DON'T LET YOUR MONEY MELT IN THE GLASS

A properly sized water filtration system, not only provide better tasting and good looking ice, but also protect your equipment, render these more reliable and efficient, saving you money for every drop treated.

- ▶ Chlorine and Chlorides can contribute to equipment corrosion.
- ▶ Mineral scale on evaporators and freezer drums can impact machine performance, leading to reduced ice production and higher energy costs.
- ▶ Dirt, sediment and scale can cause stuck valves and bridging cubes in cube machines and premature bearing wear in flake machines.
- ▶ Scale can cause inlet valves to stick, causing excessive water to go to the drain and possibly stopping ice production.
