

**KEEP YOUR
COOL WITH
EXTRAORDINARY ICE**
HIGH FLOW

ICE IS 100% WATER

- ▶ High TDS can cause misshapen, cloudy, soft and quick-melting ice.
- ▶ Chlorine and decaying organic material can give ice an unpleasant taste and odor.
- ▶ Tannins affect color and clarity.
- ▶ High iron levels can promote slime buildup inside machine, parts and bin.

-  Ice Machine
-  Water Boost
-  Steam
-  Fountain
-  Coffee

-  Espresso
-  Iced Tea
-  Drinking Water
-  Softening

-  Warewashing
-  Water Combination Systems

DON'T LET YOUR MONEY MELT IN THE GLASS

A properly sized water filtration system, not only provide better tasting and good looking ice, but also protect your equipment, render these more reliable and efficient, saving you money for every drop treated.

- ▶ Chlorine and Chlorides can contribute to equipment corrosion.
- ▶ Mineral scale on evaporators and freezer drums can impact machine performance, leading to reduced ice production and higher energy costs
- ▶ Dirt, sediment and scale can cause stuck valves and bridging cubes in cube machines and premature bearing wear in flake machines.
- ▶ Scale can cause inlet valves to stick, causing excessive water to go to the drain and possibly stopping ice production.
